TO WHOM THIS CONCERN,

I am writing to apply for the DevOps Engineer position advertise by you. I am confident that my almost 4 years of solid experience and diverse capabilities in the DevOps make me an ideal candidate to successfully fulfill this position.

During my time working as a DevOps Engineer at ALC, I was working on the full life of cycle of a two-phase project that includes requirements, definition, design, architecture, testing, and coding also, I am leading a medium-sized scrum team in which, my role is to assign the task to developers on a daily base and review their work, for this, I am using a tool called Asana. Also, I had the responsibility of designing and developing firmware for the system, creating AWS Architecture, design AWS Serverless Architecture, Creating Android Apps, Database Management, testing, and creating documents for each task-related work. I get commended by my project director for improving project quality and updating the project, I used Mind graph and ppts to show the current stage of the Project. I plan to draw on these methodologies at ALC to effectively complete the project by assigning each task with proper scheduling, issue tracking, and resource management.

My all project was based on Microservices and Serverless technique, and I had a strong experience of connecting devices with the Cloud using different protocols. Analysis data in the cloud using MATLAB and stored the data in the database. Used containerization tools like Docker, Kubernetes and Created templates for infrastructure-as-code Terraform to build staging and production environments. Also, the experience of using languages like C, C++, java, python, .NET, C#, etc.

Furthermore, I have a strong academic background to ground my work. I completed my Master in Embedded System Design at the University of South Wales with a Grade of 2.1 and designed and developed a medical-based Cloud project.

I believe that the above qualities and experiences would make me a valuable addition to your company. If there is any more information you would like me to provide, please do not hesitate to contact me.

Sincerely,
Shubham Godha
